

Macmillan Secondary Mathematics Book 5x: Teachers Resource Pack

The materials in this resource pack enable teachers to see how the work covered by Book 5X of the Macmillan Secondary Mathematics Course relates to the National Curriculum (NC) objectives, and to assess and record their pupils progress in terms of National Curriculum Attainment Targets. Book 5X contains a large curriculum map which shows how the course relates to the programmes of study within the NC. The record keeping resources consist of a set of four photocopyable record cards from the assessment materials supplied in the pack. The assessments made by other means, as in practical work, oral work, homework and cross-curricular projects, can be entered on the record cards and the assessment materials can be used separately from the record cards. The assessment materials from this pack fall into four categories - A mental work, B computer work, C written test based on the contents of each chapter in the book and D more open-ended assessment tasks. Mental work is a recognised part of the NC and computer work opportunities are represented here to enable the students to expand their level of comprehension. Category C tests relate directly to the exercises and activities of each chapter while D provides more open-ended assessment tasks. The last section of this pack comprises the answers to the exercises and suggestions on investigation found in the Pupils Book.
